Calcium, iron, potassium, and sodium are not intentionally added to this product in formulation; these minerals are naturally occurring, coinciding with one or more other mineral ingredients that are used in the formulation. Levels of calcium, iron, potassium, and sodium tend to be highly variable, and are frequently below the Limit of Quantitation (LOQ) of the analytical method. The values shown are average results of chemical analysis of randomly sampled lots of finished product. Results are on an 'as-is' basis.

Zinc Bisglycinate Chelate has an expiration date of 3 years from the manufacturing date. It is recommended that the product be stored in a cool, dry location.
